

Green Story

Reducing our carbon footprint is an important way to improve the environmental impact of our brand. Since 2020, it has been committed to assessing and reducing greenhouse gas emissions from all corporate activities worldwide.

30% of the energy consumed by enterprise operation and maintenance and product manufacturing comes from the self-built solar photovoltaic power generation system in the plant.

The wastewater in the production base is recycled and reused to achieve zero discharge of wastewater.

From material to product, from product to waste recycling, we achieve a closed-loop product life cycle.

BRAND CONCEPT

The inspiration comes from the boundless world. The world is infinite complicated, but the truth is simple from beginning to the end. Nature and environmental protection are the harmony of heaven and earth. Not only ideas, but also a kind of practices, a restless pursuit.

STRENGTH IN THE INDUSTRY

The parent company, Guangdong Relang New Material Technology Co., LTD., is a high-tech enterprise integrating research, development, production, sales and installation of high-end solid surface materials. It has the most advanced production equipment and technology in China. It has the first production capacity in China and the third in the world. It is one of the editor-in-chief units of artificial stone, non-ceramic sanitary ware and other industry standards.

With the most advanced production system, the plant achieved fully automated production through DCS computer system. Non-radiation, non-formaldehyde, non-smell, bacteriostasis. Corrosion resistance, wear resistance. B1 class fire resistance, mildew and moisture proof. Seamless stitching, easy to clean, repairable, easy to maintain, thermoforming, beautiful streamline, tailored, rich colours, warm touch.

Collaborating with top designers, RELANG solid surfaces are favored by numerous premier designs due to their exceptional performance. We are eager to engage and collaborate with designers from around the world, offering them high quality, comprehensive solid acrylic surface solutions and premium sanitary products.

MATERIAL ADVANTAGES

High quality raw materials: medical–class pure acrylic solid surface material (scientific name: PMMA polymethyl methacrylate) content > 35%, ATH (special aluminum hydroxide) powder content > 55%.

Uniform overall material: High density, non–porous, with no sanitary dead corners, and does not absorb odors.

Antibiotic–free formulation: Physically antibacterial with an antibacterial rate of over 99.9%, effectively inhibiting the growth of Staphylococcus aureus, Candida albicans, and Escherichia coli, and is resistant to stains and permeation.

Certified by multiple authoritative organizations, including ISO, NSF, UPC, and GREENGUARD (UL), with zero formaldehyde and no radiation.

B1–level fire resistance, fire integrity >60 minutes.

High material stability: Resistant to acids and alkali, impact–resistant, and resistant to buckling.

Supports any cutting and seamless splicing technology with the same material; rounded edges and corners for safety and easy cleaning, convenient for maintenance and refurbishment.

Excellent plasticity and ductility, can be themoforming.

Supports a variety of color and texture options, as well as the production of various curved and contoured shapes. It has a warm, jade–like feel and a high–quality texture, with customizable surface finishes such as matte, skin–friendly, and glossy according to specific needs.
